

The number of well water tests completed annually in WDG has **steadily decreased**.

Bacterial contamination rates are **high**.

**20.6%**

Contaminated in past 90 days

February 10.1%

August 22.8%

The highest contamination rates are seen during the summer. Due to climate change, the peak contamination period is **starting earlier and lasting longer**.

**\$0**

Cost to well-owner

Testing your well water for bacterial contamination is an under-utilized **free service**.

For your free well water test kit visit any WDG Public Health location. For more information go to:
